md=Median  
dev.=Std. Dev.  
ab.=Abstention

### Questions about the Course

What to **keep**?

- Keep the discussion of the problem sets to deepen understanding
- Overall happy with the exercise session!
- Spirit and detail of explanation
- The detailed answers in the TA sessions are very helpful as well as some background information. It is good to have an opportunity to ask questions regarding to the solution as well as regarding to the design/intention of the questions.

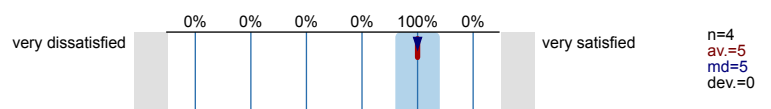

What to **drop**?

- Nothing specific.
- Starts at 8am. Grading system only in 0.5 steps (there is barely any differentiation in grades and grade falls are too steep!) Doesn't matter that it only amounts to 25%.

What to **change** and how?

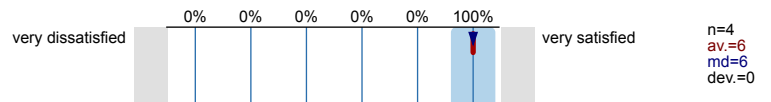

- Maybe add 1-2 possible final examen questions per session referring to the lectures before in order to help students develop a sense of what aspects are important to take away from class and it s easier to prepare for the final examen knowing what the type of questions will look like and what the answer should focus on.
- More details on the solutions when writing them down.
- Sometimes not really clear what would have been needed to get more points in the problem sets.  
A clear distinction of which points are really important in the paper would be great.

**Overall**, how satisfied are you with this **course**?

### Questions about the lecturer Lorenzo Maria Casale

**Overall**, how satisfied are you with the **lecturer**?
